(54) INFORMATION TERMINAL DEVICE FOR SUPPORTING OPERATION

(57)Abstract:

PROBLEM TO BE SOLVED: To determine a proper delivery price according to the kind of an article and the rank of a customer by inputting data on the customer, and finding and displaying the delivery piece corresponding to the article based on the customer data.

SOLUTION: Coordinate information on a position on a display which is pressed with a touch pen is inputted and the PDA outputs drawing data at the position by deciding the selected data according to the coordinate information. In this case, the delivery price corresponding to the customer data of past dealings is displayed. Further, the deduction rate is calculated from a discount delivery price and an amount of money which can be reduced is calculated from the possible deduction rate and displayed. Further, the discount amount is calculated from the reduced delivery price after the delivery price corresponding to the customer data is reduced is calculated and displayed. Consequently, a proper price corresponding to the customer data such as past dealt amount and a proper price at which no loss due to a discount more than the possible amount of discount can be determined.

The screenshot shows a PDA screen with a form titled 'インボロ管理' (Invoice Management). The form contains several fields for data entry, including '品名' (Item Name), '数量' (Quantity), '単価' (Unit Price), '総額' (Total Amount), and '割引率' (Discount Rate). There are also buttons for '入力' (Input), '検索' (Search), and '印刷' (Print). The screen is divided into sections for different types of data entry and calculation.
